Описание:

Маслянный фильтр – это важный компонент системы смазки двигателя, предназначенный для очистки масла от загрязнений и частиц, возникающих в процессе эксплуатации. Фильтр улавливает металлическую стружку, пыль, сажу и другие твердые примеси, которые могут попасть в масло и со временем повредить двигатель. Регулярная замена масляного фильтра способствует продлению срока службы двигателя, улучшает его производительность и снижает риск возникновения поломок.
